

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An Internet co-location facility security system, comprising:
 - a plurality of biometrics readers;
 - an access control system coupled to the plurality of biometrics readers;
 - a computer including a central software program connected to the access control system, the central software program configured to monitor the use of the plurality of biometrics readers;
 - a server including a database connected to the central software program, the database configured to receive information from the central software program regarding the use of the plurality of biometrics readers by a visitor associated with a co-located member during a visit to the co-location facility, and the server further configured to transmit this information through the Internet to a web-based interface co-located members through the Internet; and
 - the web-based interface further configured to allow the co-located member, or the visitor associated with the co-located member, to schedule the visit to the co-location facility via the Internet. a web-based interface configured to allow co-located members to schedule visits to the facility through the Internet.

2. (Currently Amended) The Internet co-location facility security system of Claim 1 further including an input device coupled to each of the plurality of biometrics readers for entry of a visitor identification code of a the visitor, ~~wherein a match between the visitor identification code and the visitor's personal identification characteristics triggering the~~ access control system is configured to allow the visitor to gain access to designated areas in the facility upon a match between the visitor identification code and the visitor's personal identification characteristics.

3. (Currently Amended) The Internet co-location facility security system of Claim 2 wherein the access control system further includes a transmitter ~~for transmitting to~~ transmit the information regarding the use of the plurality of biometrics readers to the central software program, the information regarding the use of the plurality of biometrics readers including the visitor identification code and the date and time the visitor used one or more of the plurality of biometrics readers.

4. (Original) The Internet co-location facility security system of Claim 1 wherein information regarding the scheduled visits transmitted by the co-located members through the Internet to the database on the server includes the date, time, expected duration of a scheduled visit, and a visit identification number for the scheduled visit.

5. (Currently Amended) The Internet co-location facility security system of Claim 1 wherein the server further includes a transmitter ~~for transmitting to~~ transmit information regarding the scheduled visits to the central software program through a network.

6. (Currently Amended) The Internet co-location facility security system of Claim 1 further including a front entrance biometrics reader for initial access to the facility, ~~the~~

~~upon initial use of~~ at the front entrance the biometrics reader configured to trigger
~~triggering~~ the central software program to transmit information regarding the use of the
front entrance biometrics reader to a lobby workstation.

7. (Currently Amended) The Internet co-location facility security system of Claim 1
further including a user interface ~~for triggering~~ to trigger the central software program to
combine a visitor identification code with a visit identification number for the scheduled
visit.

8. (Original) The Internet co-location facility security system of Claim 7 wherein
the user interface authorizes a visitor to progress through the remainder of the facility
using the plurality of biometrics readers.

9. (Original) The Internet co-location facility security system of Claim 1 wherein
information regarding the use of the plurality of biometrics readers is transmitted by the
central software program through the network to the database on the server, the
information including a visitor identification code, a visit identification number for the
scheduled visit, and the date and time a visitor used any one of the plurality of biometrics
readers.

10. (Original) The Internet co-location facility security system of Claim 9 wherein
the co-located members may access the information in the database regarding a visitor's
use of the plurality of biometrics readers by using the web-based interface accessible
from one or more remote computer terminals connected to the Internet.

11. (Currently Amended) An Internet co-location facility security system,
comprising:

an enrollment biometrics reader;

an access control system coupled the enrollment biometrics reader and to a plurality of other biometrics readers;

a computer including a central software program connected to the access control system, the central software program configured to monitor the use of the plurality of other biometrics readers; and

a server including a database connected to the central software program, the database configured to receive information from the central software program regarding the use of the plurality of biometrics readers by a visitor associated with a co-located member during a visit to the co-location facility, and the server further configured to transmit this information through the Internet to a web-based interface co-located members through the Internet; and

the web-based interface further configured to allow the co-located member, or the visitor associated with the co-located member, to schedule the visit to the co-location facility via the Internet. a web-based interface configured to allow co-located members to schedule visits to the facility through the Internet.

12. (Original) The Internet co-location facility security system of Claim 11 further including an imaging device to record an image of a personal characteristic of a visitor not previously enrolled in the security system, the image of the personal characteristic stored on a storage device in the enrollment biometrics reader.

13. (Currently Amended) The Internet co-location facility security system of Claim 12 further including an input device coupled to the enrollment biometrics reader ~~for~~ matching configured to match a stored image of the visitor's personal characteristic with

a visitor identification code entered into the enrollment biometrics reader through the input device.

14. (Original) The Internet co-location facility security system of Claim 13 wherein the enrollment biometrics reader transmits a stored image matched with a visitor identification code to the plurality of other biometrics readers located in the facility through a private security network.

15. (Currently Amended) The Internet co-location facility security system of Claim 11 including an input device coupled to the access control system and configured to allow ~~wherein a visitor may be enrolled~~ to enroll in the access control system by entering the visitor information into an the input device ~~coupled to the access control system~~.

16. (Currently Amended) The Internet co-location facility security system of Claim 11 wherein a stored image matched with a visitor identification code from the enrollment biometrics reader and identification information from the access control system is download by the central software program, the central software program configured to transmit ~~transmitting~~ the information through the Internet to the database on the server.

17. (Currently Amended) The Internet co-location facility security system of Claim 16 wherein the ~~database~~ server is further configured to transmit ~~transmits~~ the information from the central software program through a network to ~~[[a]]~~ another database on ~~[[a]]~~ another server in one or more other co-location facilities.

18. (Currently Amended) The Internet co-location facility security system of Claim 17 wherein the server is further configured to transmit ~~database transmits~~ the information through the network to an access control system and through a private security network to

a plurality of biometrics readers in one or more other co-location facilities, the information transmitted by the database to automatically enroll ~~enrolling~~ the visitor on the access control system and the plurality of biometrics readers in the one or more other facilities.

19. (Cancelled)

20-25. (Cancelled)

26. (Currently Amended) An Internet co-location facility security system, comprising

- a plurality of biometrics readers;
- an access control system coupled to the plurality of biometrics readers;
- a computer including a central software program connected to the access control system, the central software program configured to monitor the use of the plurality of biometrics readers; and

a web-based interface communicatively coupled to the computer and configured to allow a co-located member[[s]], or visitor associated with the co-located member, to schedule ~~visits~~ a visit to the co-location facility through the Internet ~~to the database on the server.~~

27. (Currently Amended) The Internet co-location facility security system of Claim 26 further including a server ~~including~~ communicatively coupled to a database, the sever further communicatively coupled ~~connected to~~ the central software program, the ~~database server~~ configured to receive information from the central software program regarding the use of the plurality of biometrics readers by the visitor and to transmit this information to the co-located member[[s]] through a network.

28. (Currently Amended) The Internet co-location facility security system of Claim 26 further including an input device coupled to each of the plurality of biometrics readers and configured to receive input pertaining to ~~for entry of~~ a visitor identification code of ~~[[a]]~~ the visitor, wherein a match between the visitor identification code and the visitor's personal identification characteristics ~~triggering~~ trigger the access control system to allow the visitor ~~to gain~~ access to designated areas in the co-location facility.

29. (Currently Amended) The Internet co-location facility security system of Claim 26 wherein the access control system further includes a transmitter to transmit ~~for transmitting~~ the information regarding the use of the plurality of biometrics readers to the central software program, the information regarding the use of the plurality of biometrics readers including a visitor identification code and the date and time the visitor used one or more of the plurality of the biometrics readers.

30. (Currently Amended) The Internet co-location facility security system of Claim 26 wherein the central software program is configured to combine ~~combines~~ a visit identification number with the information regarding the use of the plurality of biometrics readers from the access control system, the combined information transmitted to the database on the server where it is accessible to co-located members from one or more remote computer terminals connected to the Internet.

31 –35 (Cancelled)
